

# The **Big Bottle** Co.

## How do I look after my big bottle?

**When cleaning or filling me, ALWAYS hold me by my HANDLE.**

Made from high grade Eastman USA plastic and the latest manufacturing techniques, your Big Bottle is designed to **Live Big** with you every single day. However please note, due to its unique tapered-design and large water holding capacity that it is not invincible.

Treat your bottle with care and follow the below instructions so you will continue to enjoy all its benefits.

### **First Time Use:**

Please ensure that you follow these steps.

1. Check that the white inner rubber seal is flush within the inside of the cap.
2. Fill your bottle with 1 litre of cool water.
3. Twist cap - DO NOT over tighten. It should fit snugly and securely.
4. Again holding your Big Bottle by the handle (over the sink) please tip your Big Bottle upside down to ensure that your cap and seal are watertight.
5. Turn your bottle upright again and lightly shake your bottle before disposing of the cool water.
6. Wash your Big Bottle with some warm soapy water, including the inside of the cap.
7. Rinse thoroughly with warm water.
8. Your Big Bottle is now ready to use. Enjoy!

## **Dishwashing:**

A residential “dishwasher safe” means no more than a 60-degree cycle.

We’ve independently tested and accredited as “dishwasher safe”.

Please check your dishwasher model to ensure your standard wash does not exceed this maximum heating range.

Please note: that if you have a rose-gold cap we recommend you remove it prior to dishwashing in order to protect the integrity of the finish.

## **Handwashing:**

If a dishwasher isn't your thing or you are unsure of your dishwashing machines setting - just use some warm water with your preferred dishwashing liquid, a good old shake holding from the handle, then rinse.

Allow your bottle to cool before placing any cold liquid in it.

## **Don't's**

DO NOT use pot or heavy cycles – this will damage your bottle.

DO NOT lean your Big Bottle against the side of the dishwasher or against pots, pans or any other item.

## **Freezers:**

If you want to stay cool with iced water you can pop your Big Bottle in the freezer. However please note that this means no greater than minus 8 degrees. In order to ensure the integrity of your bottle for the greatest amount of time do not fill your bottle more than 2/3 full if planning on placing in the freezer and do not leave within the freezer for greater than 8 hours at a time.

### **Please note:**

**The Big Bottle is designed for water carry and consumption; it is not designed to withstand large drops, force, impact or being exposed to extreme conditions.**
